

 **Professional** Health Care Laundry

Thinking of you
 **Electrolux**

Never stop thinking

When we say we are thinking of you, we really mean it. We do everything we can in order to understand market trends and to anticipate your needs and the problems you want solved. We do not design for design's sake, but for your sake. We devote our time, our know-how and our insight to developing appliances that will make you say, "This is exactly what I wanted! How did you know?" The answer is simple: because we were thinking of you when we made it.

Today, people are concerned about climate change, and – just like you – we want to make a difference. Electrolux takes a broad approach to the environment, which includes setting criteria for products in terms of low electricity, water and gas consumption, without compromising on functionality and performance.

GREEN RANGE

At Electrolux, we also maintain high environmental and ethical standards at our facilities and for our suppliers – no matter where in the world they are located.

We have a long-standing good reputation for our work with the environment and corporate responsibility. We have been recognized as being at the cutting-edge in the development of energy and water efficient products.

Electrolux. Thinking of you.

To us, it is natural to focus on environmental and safety considerations. Our production units are certified in accordance with the ISO 9001 (Quality) and ISO 14001 (Environmental Management) standards, and our products are CE and S-labelled.

A caring partner in health care laundry

Health care demands specially adapted hygienic washing machines

Heavily contaminated laundry (e.g. clothes stained with faeces and bacteria) requires special washing processes and equipment.

As one of the largest manufacturers of professional laundry equipment in the world, Electrolux Professional Laundry Systems can offer a wide range of hygienic washing machines. These machines feature special programmes that easily meet the norms of the Swedish Health and Hospital Care Standardization (HSS) organization.

An efficient Textile Care Room™ reduces costs

Handle textile care in-house. There is much to be gained by washing ward clothes,

terrycloth and staff uniforms on the ward. And with larger hygienic washing machines at the unit, it is also possible to wash larger items such as antidecubitus mattresses, blankets and small rugs. Moreover, it will help cut costs.

We take responsibility for our products long after installation

Our machines are built to function in tough environments for year after year, and as extra security, we offer Full Service Agreements on all our products. These agreements include an annual maintenance visit as well as complete responsibility for parts and repairs, which minimizes the total cost and extends both service life and uptime.

Health Care demands specially adapted hygienic washing machines

Specially adapted washing processes

A hygienic washing machine features unique washing processes which, for example, dissolve albumin and completely remove tough stains such as blood and faeces.

The process applies extremely high temperatures when such are required, and maintains them for a sufficient period to ensure disinfection.

Hygienic washing with professional equipment

Professional hygienic washing machines and efficient tumble dryers can deal with large volumes of textiles on the ward.

This makes it simple to deal with ward clothes and minimizes the risk of mix-ups. In addition, handling laundry in-house makes it possible to deal with urgent washes should the need arise. A Textile Care Room™ opens the door to natural job rotation and full control, which results in improved well-being and security for both staff and patients.

An efficient Textile Care Room™ at the department: 1 x W465H Hygiene + 1 x T4190 + 1 x TS460

An example of a product combination that would be perfect for the laundry from a ward with at least eight patients. All our washing machines feature special programmes for hygienic washing.

A Textile Care Room™ that can handle mattresses, blankets, etc.: 1 x W4130H Hygiene + 1 x T4350

Supplement the ward's textile care room with a central unit for hygienic large volume laundry. This will make it possible to deal with all kinds of laundry in-house. Large drum volumes and specially designed washing programmes allow you to wash and dry antidecubitus mattresses without damaging the sensitive microfibres they contain.

A separate laundry for your home care service!

- 1 x W465H Hygiene
- + 2 x W4130H Hygiene
- + 2 x T4350
- + 1 x TS4121
- + 1 x IC4 3316 (rotary iron)

It can be difficult for home help staff to deal with all their tasks, and laundry from seniors

is often more demanding than other types

of washing. The opportunity to collect all kinds of textiles and wash

them in the home help service's own laundry has become greatly appreciated by local authorities.

Professional equipment and the automatic dosing of washing detergent makes laundry child's play. There is also equipment for subsequent treatment (e.g. ironing). If the laundry work is made easier for home help staff, they will have more time to look after the seniors. A well-functioning Textile Care Room™ brings many benefits.

Tailor your choice
