

Professional Workwear Laundry

Thinking of you

 **Electrolux**

Never stop thinking

When we say we are thinking of you, we really mean it. We do everything we can in order to understand market trends and to anticipate your needs and the problems you want solved. We do not design for design's sake, but for your sake. We devote our time, our know-how and our insight to developing appliances that will make you say, "This is exactly what I wanted! How did you know?" The answer is simple: because we were thinking of you when we made it.

Today, people are concerned about climate change, and – just like you – we want to make a difference. Electrolux takes a broad approach to the environment, which includes setting criteria for products in terms of low electricity, water and gas consumption, without compromising on functionality and performance.

At Electrolux, we also maintain high environmental and ethical standards at our facilities and for our suppliers – no matter where in the world they are located.

We have a long-standing good reputation for our work with the environment and corporate responsibility. We have been recognized as being at the cutting-edge in the development of energy and water efficient products.

Electrolux. Thinking of you.

To us, it is natural to focus on environmental and safety considerations. Our production units are certified in accordance with the ISO 9001 (Quality) and ISO 14001 (Environmental Management) standards, and our products are CE and S-labelled.

Our Textile Care concept – your textile care success!

Our professional laundry concept is based on the fact that there are clear benefits for those who wash their workwear themselves

In many sectors, specific requirements apply to safety, hygiene, profiling, etc. For this reason, many companies use specially adapted workwear: clothing made of various textiles, and sometimes fitted with built-in protection and reflectors. Special processes are needed to wash these clothes, as it is extremely important to maintain the original appearance and functionality of the clothing throughout its service life.

Wash in-house!

Washing workwear in-house involves special requirements on equipment and processes. No matter how large or small your company may be, washing workwear in-house will pay dividends in almost all cases.

All our washing machines can be supplied with special programmes or specifically programmed and adjusted to cover your textile care needs precisely. The most appropriate machine combination depends on your current laundry needs. Of course, we will be happy to pitch in with

our knowledge and experience to help you put together the optimal textile care solution for your company!

Functional protective clothing for different environments

Protective clothing must be washed correctly to ensure that it meets the requirements for both safety and hygiene.

Correct re-impregnation can be a form of life insurance for the person wearing the clothes. Our washing machines can be programmed individually and adapted to meet the washing and protection requirements in question.

We tailor solutions in which professional washing machines and tumble dryers make it safe and simple to deal with different volumes of laundry.

We take responsibility for our products long after the installation

Every machine is built to operate in a tough environment for many years. As extra security, we also offer Full Service Agreements on all our machines. These agreements ensure that the products receive regular maintenance (including labour and materials), which reduces your total costs even further!

We care about your textile care

Lower costs

Companies that choose to wash workwear themselves soon recoup their investment in laundry equipment.

Full control

By washing workwear in-house, companies achieve full control of the entire textile handling process and can easily control the laundry results and monitor availability.

Custom storage

When laundry is handled in-house, you can also ensure clean laundry stores match requirements.

Gentle processing

Adapted washing processes minimize textile wear and ensure that the clothes maintain their appearance and functionality for as long as possible.

Reliable laundry handling

Electrolux Professional Laundry Systems washing machines use **Compass Control™** or **Clarus Control™** to insure the washing results. With fully adapted programmes, it is possible to wash almost all kinds of workwear. Everything is washed at the correct temperature to protect the welds in the seams. Bacteria and tough stains such as blood and oil are eliminated, and new impregnation is added automatically as and when required.

Select the programme and press the start button, and everything will be handled automatically.

Simple to use

Our professional machines make it very simple to wash workwear. A lot of companies include laundry as a part of a job rotation scheme at the workplace, and it is usually a much sought-after job.

Large volumes in a small area

Our professional washing machines are built to wash large volumes in a short time. A complete set-up comprising a washing machine and tumble dryer requires minimal space, and the machines are so easy to use that everyone can give a hand with the laundry.

Subsequent treatment as required

Complete control over the drying process is possible thanks to Electrolux Professionals advanced microprocessor technology. With our **Compass Control™** it is simple to choose alternative settings for maximum drying flexibility.

They feature a number of different drying programmes where the machines always measure the residual moisture in the laundry. The tumble dryer stops automatically when the laundry is dry, which minimizes drying time and energy consumption. In addition, the reversing function distributes the laundry evenly in the drum and leaves the clothes free from creases. This means that many items are ready to wear immediately after drying!

High-visibility clothing is intended to prevent accidents and save lives – so wash them correctly

High-visibility clothing is often worn in dirty environments – at road works and on construction sites of various types.

The luminous fabric has been specially prepared and must be washed correctly. Our laundry equipment can be fitted with tailor-made washing processes specially designed for such clothing so as to maximize its service life. Buying high-visibility clothes and washing them in-house is not just a cheaper option – it is also smarter: you maintain full quality control.

Clean at the right temperature

Protective clothing is often heavily soiled by smoke, soot, asphalt, oil or blood, for example. These clothes have to be washed completely clean without damaging their important functions.

– Welded seams and reflectors must not be

subjected to excessively high temperatures or mechanical wear.

– Protein stains have to be handled correctly to prevent them from coagulating.

Our specially developed programmes feature unique processes for different types of protective clothing.

Impregnation and function

Sometimes, it is not enough to wash protective clothing clean. In the food industry, for example, each and every jacket and pair of trousers has to be disinfected to eliminate bacteria.

When it comes to firefighters and rescue service personnel, overalls and jackets have to be impregnated against moisture, and protective clothing for electronics workers has to undergo antistatic treatment.

The requirements are stringent and the variations numerous, but our washing processes are designed to ensure that they meet the demands for every type of protective clothing exactly. Every time they are washed!

Let us turn your professional textile care into a great business

Wash in-house!

Washing work clothes in-house involves special requirements on equipment and processes. No matter how large or small your company may be, washing workwear in-house will pay dividends in almost all cases.

All our washing machines can be supplied with special programmes or specifically programmed and adjusted to cover your textile care needs precisely. The most appropriate machine combination depends on your current laundry needs.

Of course, we will be happy to pitch in with our knowledge and experience to help you put together the optimal textile care solution for your company!

Company with 10–20 employees:

1 x W475H + 1 x T4250

This combination generally covers the laundry needs of small companies exceptionally well. Just imagine: with your own Textile Care Room™, you can wash at any time of the day or night!

Company with 100 employees:

1 x W465H + 1 x T4190 + 1 x W4130H + 1 x T4350 + 1 x TS4121

Here, we are talking about a greater need for flexible washing, where companies have to be able to deal with individual items and large loads of laundry at the same time. Some work clothes, masks or boots also need to be hung up to dry. This is something we can handle with an automatic drying cabinet that shuts off when the items are dry.

Company with 200 employees:

1 x W475H + 2 x W4130H + 2 x T4350

A complete Textile Care Room™ for heavy-duty requirements – but still with the option of washing smaller loads or even individual items, as the AWS function featured in our small washing machines (up to 130 litres) automatically adapts electricity and water consumption to match the weight of the laundry loaded into the machine.
